### Superstructure Assembly Schematic

The Splash SuperPool is simple, durable, and portable. No tools are required to install the SuperPool. The superstructure simply snap-couples together, with all the metal parts being durable, rust-resistant, powder-coated, galvanized steel.

Once the ground is level within 3 inches, it can typically be set up in less than an hour, ready for water.

Unlike other above-ground pools, the Splash SuperPool can be easily moved to different locations. It can be left up through the winter or disassembled for off-season storage.
