Employees of the Month:

Congrats to Stephen Solorzano who was named our August Employee of the Month! Stephen went above and beyond to make sure our customers were taken care of last month.

Closing Down Your Pool?

Are you closing down your pool for the summer? Let our pool division do the work and get you ready for next year!

The Story of the Old Yellow Truck

At John H. Coleman Company, we're proud of the history that has shaped who we are today. Founded in 1945, our company has been serving the community for generations, and every year we're reminded that longevity comes from hard work, trust, and dedication. Recently, we found a way to showcase that history in a very tangible way—with the addition of a 1946 Ford truck to our family.

The 1946 Ford is not just any classic vehicle. During World War II, Ford and other American automakers halted civilian truck production to focus entirely on building military vehicles and equip-

ment. That meant there were no Ford trucks produced in 1945. When production finally resumed in 1946, these trucks became the first post-war models, carrying with them a unique story of resilience and new beginnings.

Our 1946 truck still has its original flathead motor and runs beautifully, a rare quality for a vehicle of its age. We restored it in our signature yellow—matching the trucks our teams drive every day—and it now stands as a rolling symbol of our company's heritage.

Much like our company itself, this truck is a reminder of how strong founda-

tions endure the test of time. Just as Ford restarted production after the war, John H. Coleman Company has continued moving forward, decade after decade, always with a focus on serving our customers. This special yellow truck not only represents where we've been but also drives home the values that keep us going strong today.

If you spot our old yellow truck around town, be sure to give us a wave!

Winter Plumbing Checklist!

PRE-WINTER PLUMBING CHECKLIST ✨

- Disconnect garden hoses and shut off outdoor faucets
- Check exposed pipes and insulate if needed
- Flush your water heater
- Clean gutters and drains
- Consider a professional inspection

As cold weather approaches, a few quick steps can save you major headaches. Disconnect garden hoses and shut off outdoor faucets to keep pipes from freezing. Check exposed pipes in basements, crawl spaces, and garages, and insulate where needed. Flush your water heater

to remove sediment and improve efficiency. Clear gutters and drains so water flows away from your home. Finally, schedule a professional inspection to catch small leaks or issues early. A little preparation now helps keep your plumbing safe, reliable, and worry-free all winter.
