

# Anthony Waterer Spirea

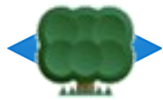

(*Spirea x bumalda* 'Anthony Waterer')

**Shrub**

**3' - 5' High**

**3' - 5' Spread**

**4 + Hours**

**Summer Bloomer  
Hedge Plant**

**Zone 4 - 9**

The most striking feature of the Anthony Waterer spirea is its profusion of showy pink flowers. The clusters of flat-topped flowerheads, called corymbs, cover the shrub, creating a dazzling display. The individual flowers are small, five-petaled, and intensely colored, ranging from deep pink to reddish-pink. The blooms attract butterflies and other pollinators, adding to the garden's vitality. Additionally, the foliage undergoes a beautiful transformation in the autumn, turning shades of bronze, orange, and burgundy, adding another layer of visual appeal to the plant.
