

Neptune Seedless Grape

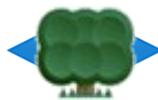

(*Vitis vinifera* 'Neptune')

Fruit

4' - 6' High

6' - 8' Spread

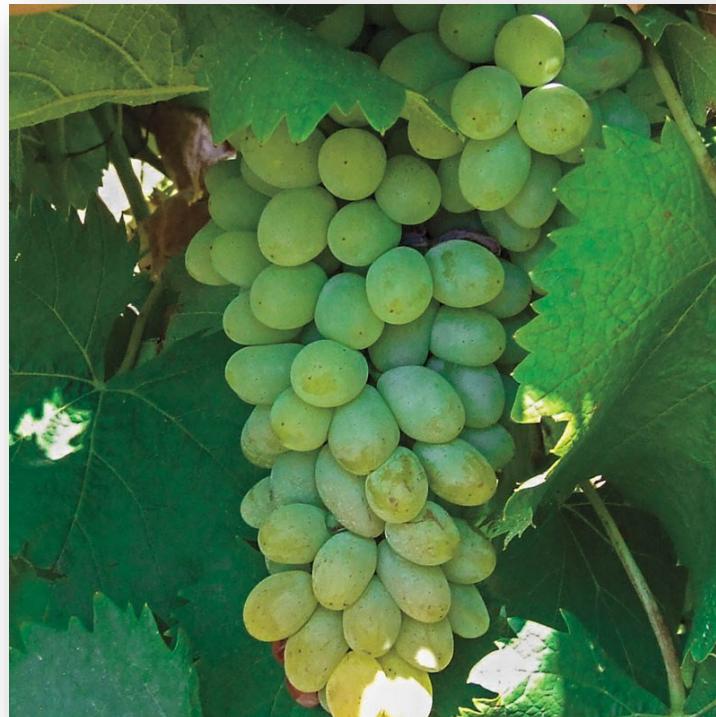

4 + Hours

**Seedless
Large Fruit**

Zone 5 - 8

Neptune grapes are perfect for eating fresh, making juice, or for use in a variety of culinary applications, such as making jams, jellies, and wine. The grapes ripen in mid to late season, typically around August to September, and are easily harvested by hand. This vine is highly resistant to fungal diseases such as powdery mildew and downy mildew, as well as pests.
