

Botox

Reduce wrinkles and headaches

What is Botox?

The cosmetic form of botulinum toxin, sometimes referred to as "Botox" by patients, is a common injectable that temporarily reduces or eliminates facial fine lines and wrinkles. Botulinum toxin is a purified substance that's derived from bacteria. Injections of botulinum do their work by blocking the nerve signals to the muscle which it was injected. Without this signal, the muscle is unable to contract resulting in a beautifully diminished appearance of those unwanted facial lines, reduced headaches, and decreased clenching and grinding.

What are the benefits of Botox treatment?

- Reduce fine lines and wrinkles
- Hide crows feet
- Soften smile lines
- Diminish forehead lines
- Treatment for migraines/headaches
- Reduce clenching and grinding

Fillers

Restore volume and fine lines

What are Fillers?

Dermal fillers are a collection of hyaluronic acids that temporarily add volume to areas where they are injected into the skin. Hyaluronic acid is a sugar naturally produced by the body that retains moisture in the skin. Fillers typically last 6-9 months before retreatment is recommended to maintain best results.

At Great Blue Dental, we use JUVÉDERM® fillers which are the #1 chosen FDA approved collection of hyaluronic acid fillers in the US.

What are the benefits of Filler treatment?

- Plump lips
- Reduce wrinkles
- Smooth lines
