We build relationships that are based on trust and integrity. Our goal is to provide roofs that will deliver an ownership experience that delights and is consistent with the premium products that we sell, service and install.

We are driven by a philosophy that our success will ultimately be determined more by the number of people we help rather than the amount of roofs we install.

We invite you to contact us to discuss your individual needs and for a customized quote.

David Martin

## Effects of Heat & Moisture:

- |  |                   |
|--|-------------------|
| 1. Higher Utility Bills                        | 5. Peeling Paint  |
| 2. Mold & Mildew                               | 6. Wet Insulation |
| 3. Wear & Tear on<br>Heating & Cooling Systems | 7. Rotting Wood   |
| 4. Crumbling Shingles                          | 8. Heat in Home   |

**David Martin recommends a continuous ridge vent system.**

Ridge Vents are designed to take maximum advantage of the natural movement of Heat & Air convection.

### **Other types of additional ventilation:**

*(Engineers always recommend more ventilation)*

#### Types of Intake Ventilation:

Under-Eave Vents  
Gable Louvers

#### Types of Exhaust Ventilation:

Ridge Vents  
Roof Low Profile Vents  
Wind Turbines  
Power Ventilators  
Solar Fans

For a personal ventilation inspection:  
**Contact Us! 817-236-9898**

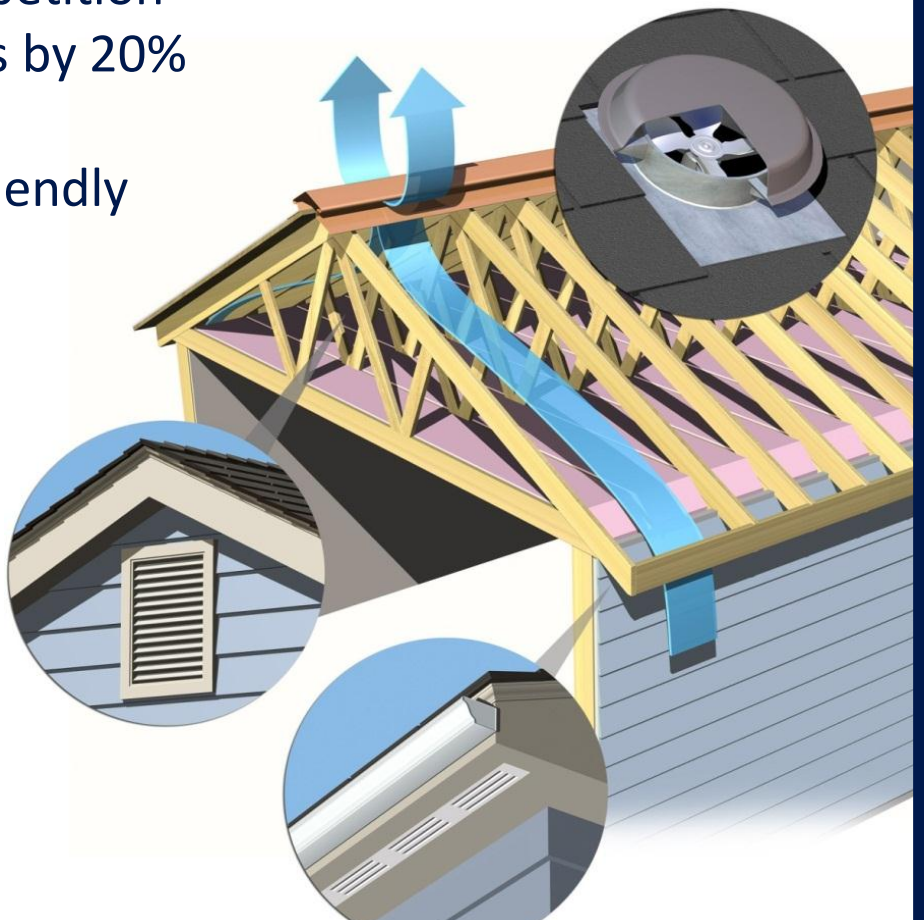

## Ventilation

Attic ventilation might seem like a minor consideration, but when properly installed, it can extend the life of your attic and roof structure - saving you hundreds of dollars in repair costs. During warmer months, ventilation helps keep attics cool. It helps prevent hot, moist summer air from warping the roof sheathing. It also stops shingles from deteriorating prematurely. Fresh air in the attic makes a home much easier to cool, which can result in lower energy costs. In winter months, ventilation helps reduce moisture to keep attics dry. It stops water from backing up under shingles, damaging insulation, and rotting the roof structure.

### Why Switch to Ridge Vent?

- Out Performs Competition
- Lowers Utility Costs by 20%
- Maintenance Free
- Environmentally Friendly

## David Martin Recommends

- Standard Installation by David Martin & Son Roofing

**Open ‘W’ Valleys** provide a better appearance and water runoff (many neighborhood associations require open valleys for aesthetics).

**All Ridge Vents** extend to the end of the horizontal peaks for a continuous appearance.

**High Definition Ridge** “on all hips and ridges” provide a high definition appearance.

**Lead Roof Jackets** on all vent boots to protect against leaks.

**High Definition Architectural Shingles.**

**Installation:** All roofs are installed with hand driven nails to ensure the shingles will not blow off due to strong winds. **David Martin recommends 30lb felt** Instead of the standard 15lb felt on all 30 year roofs or greater.

## Industry Standards not recommended by David Martin

\*Industry Standards not recommended\*

Closed Valleys show a “hump” on the roof and are commonly used.

Ridge Vents stop 1 foot before the horizontal peak making the roof less appealing to the eye.

3 Tab Ridge has a flat look and no dimensional appearance.

Neoprene Pipe Jacks crack and leak frequently around the rubber boot.

Cheaper shingles give you a less dimensional look.

**Installation:** Most roofs are installed with nail guns or staples that will blow off in strong winds.

## Frequently Asked Questions

**Q: How long should I expect my roof to last?**

A: All roofs eventually wear out. How quickly depends on several factors including: quality of materials, quality of attic & roof ventilation and the climate.

**Q: What causes a roof to wear out?**

A: Several factors combine to affect roof deterioration. These may include ultraviolet radiation from the sun, temperature extremes, exposure to wind & rain, and foot traffic on the roof. Darker color shingles may have shorter service life than shingles with a light color.

**Q: What causes wood shingles to split and crack?**

A: Splitting and cracking of wood occurs naturally as a part of the aging process, largely due to shrinking and swelling caused by moisture and subsequent drying.

**Q: Can an existing roof be covered with another?**

A: Multiple roofing layers tend to decrease a roof's resistance to hail. Make sure to check local building codes, as some building codes and ordinances restrict the number of roofing layers a house may have. Another issue to consider with wood shingles when applying a new roof over the wood shingles is possible fungus problems.

**Q: Can composition shingles be repaired?**

A: Yes. If damage is minor, a roofing contractor can remove individual shingles and replace them with new shingles.

**Q: What size hail is damaging to roofing?**

A: This depends on several variables – shape, hardness, & density of hail, wind speed, age, and type of roof. In general, pea and marble size hail should not damage composition shingles in good condition, unless extreme winds are present.

**Q: You noticed granules from your composition roof in your gutter and driveway. Is this normal?**

A: Yes. With composition shingles, granular loss is a part of the normal weathering process. Small hail impacting a roof often displaces some of the granules as does rain, wind and foot traffic.

**Q: You noticed lighter colored “splatter” marks on your roof after a hailstorm. Is this damage?**

A: No. The “splatter” marks that you see are normal after a hail storm. Your roof has darkened over time since its installation as a result of algae and oxidation. When the hailstones contact the roof, the algae and oxidation are removed, leaving a light colored mark. In time, these marks will fade as algae grows and oxidation continues on your roof.

**Q: Are all homes in a neighborhood affected the same way by hail?**

A: No. The number, size and hardness of hailstones can vary tremendously within a small locality. Other factors include velocity and direction of the wind, roof pitch, age and condition. Each roof is different.

## Frequently Asked Questions

**Q: What are the special challenges you need to consider when replacing your roof?**

A: There are several subjects that you should keep in mind as you begin the process of replacing your roof. Lets take a look.

1. Your roof might have been designed to be a wood shingle roof.
2. In many cases, the eaves of your home do not have adequate positive air intake to provide proper ventilation when a composition roof is installed.
3. By adding 7/16" decking on top of 1"x4" wood lath, this alters the design of the roof and changes the interface of the materials with your existing trim, valleys & dormers.
4. The wood shingle roof had the ability to breath air on its own due to the evaporation of moisture and normal heat convection. Therefore, you most likely did not have any additional ventilation add-ons like powered vents or wind turbines.
5. In some cases, you have vaulted ceilings that are constructed into the roofline and insulation was laid between the 1"x4" lath and the sheetrock without any way for air to circulate and dissipate heat away from the vaulted ceiling areas. There are now available, special channels that can be installed during a re-roofing project that will allow air movement in such vaulted ceilings.
6. We now have some new hi-tech materials to choose from that can save you money with your heating and air conditioning bills. For example, solar shield decking, solar powered temperature sensory exhaust fans along with Energy Star rated roofing products are available. There are also Ridge Vents that provide non-powered attic ventilation. 5 feet of Ridge Vent is equal to 2 wind turbines.
7. Wind turbines and temperature sensing powered exhaust fans are still available. What you must remember is that without some way to move the hot air out of your attic, your new composition, metal or thermoplastic roof will be an oven and your air conditioning bill will reflect a much higher cost than it should. There must be adequate air intake & exhaust to keep attic temperatures down.
8. You may have a closed valley or an open valley. The only problem with a closed valley is the appearance of built up material or "hump" in your roof from the overlap. With a open valley design you eliminate that hump and provide an excellent way to divert water from your roof.

**If you have any additional questions not answered, please call us!**

2 June 2010

David Martin and Son Roofing  
5013 Colleyville Blvd.  
Colleyville, Texas 76034

Dear Homeowner,

I am pleased to recommend David Martin and Son Roofing in regards to any roofing needs that you may have. As a long term member of the roofing industry, I have dealt with thousands of roofers and roofing companies. I can assure you that David Martin and Son Roofing is one of the best. Their focus since the beginning has always been to provide the absolute highest quality materials and service to their clients.

I have known David personally for several years, have visited countless numbers of his jobs, and have met dozens of his homeowners. What they all have in common is a truly great roof and an exceptional service experience! David has never scrimped on the materials that go into his jobs, and in fact goes above and beyond anything that 'typical' roofing companies offer.

Sincerely,

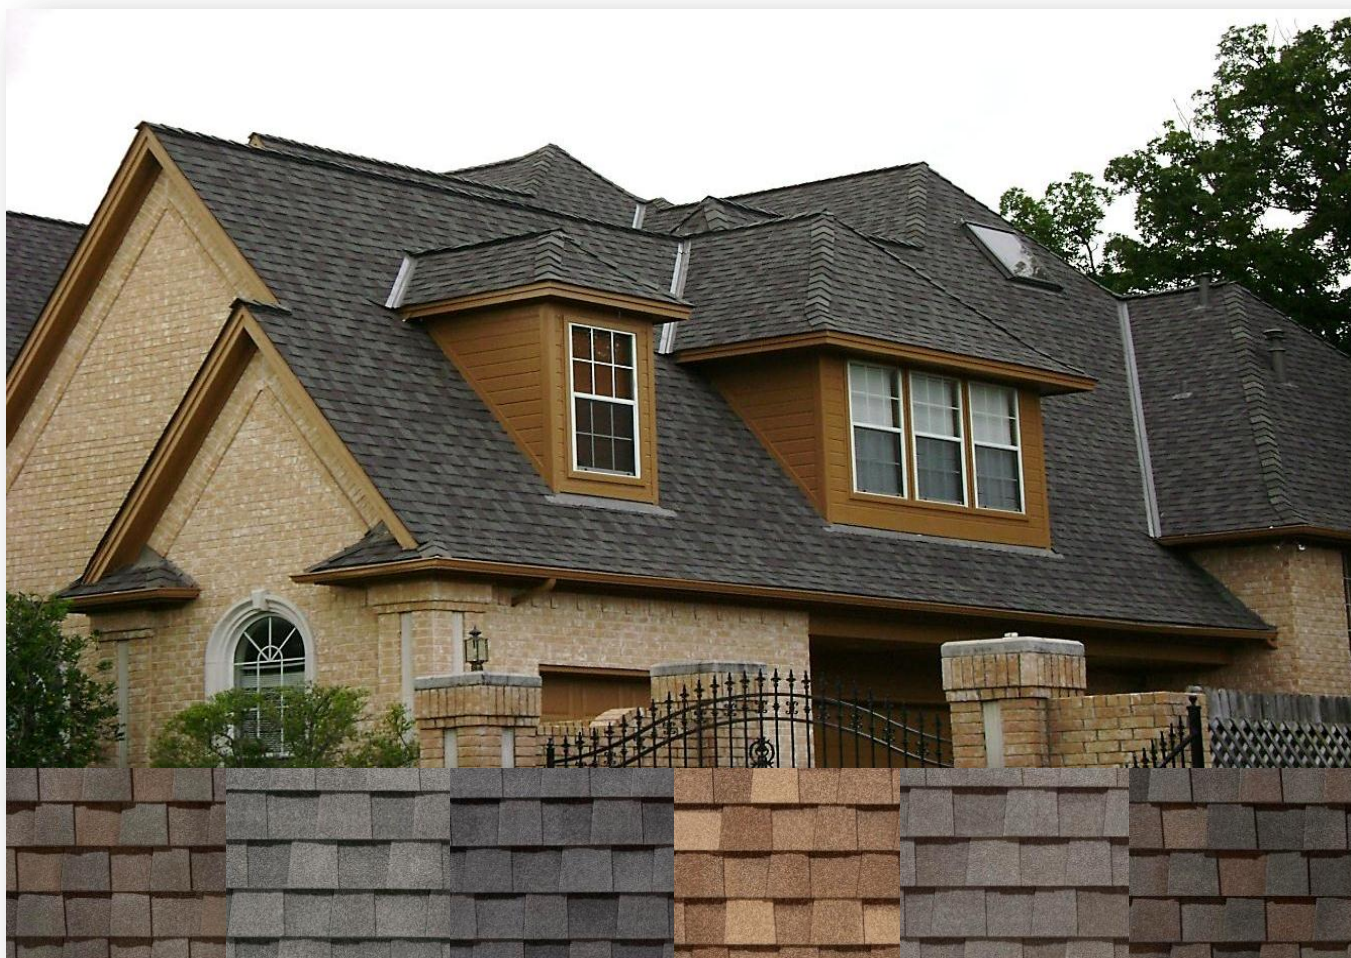

*Michael C. Harrison*

## Additional Products

### Composite Shingles

**Symphony Slate** – Symphony composite slate shingles is a masterpiece of synthetic slate design with enduring qualities of tooled craftsmanship, natural beauty, and harmony. Symphony is a specially-engineered composite roofing shingle that mimics the look and feel of natural slate, but is lighter, more durable and a fraction of the price. The Symphony product line has earned the designation as an ENERGY STAR® Qualified Product, a label given to products that use less energy, save money and help protect the environment.

**Enviroshake** – Enviroshake is a unique environmentally friendly composite, 95% of which is derived from reprocessed post-industrial polymers, fibers, and rubber. Enviroshake is a composite roof material designed to simulate a real cedar roof. Comes with a 50-year Non-Prorated Warranty (Manufacturer covers full cost of defective shingles or leaks due to a defect in the shingle for the full 50 years)

### Stone Coated Steel

**Decra Shake** – Decra Shake is manufactured using the finest lightweight pressure formed aluminum-zinc alloy steel, covered with 3M ceramic coated stone granules and sealed with an exclusive polymer coating. Guaranteed that hail will not penetrate the shingle. Comes with a 50-year Ltd. Transferable Warranty and a 20-year SureStart Protection (Non-Prorated or Manufacturer covers full cost of defective shingles or leaks due to a defect in the shingle for the first 20 years)

### Modified Bitumen

**SBS Hot Mop Applied** – SBS Hot Mop Applied Modified Bitumen is a hot asphalt applied, mineral surfaced, modified bitumen waterproofing membrane composed of carefully selected asphalts (bitumen) having superior modifying characteristics, blended with high quality styrene-butadiene-styrene rubber. Reinforced with a high-strength fiberglass mat.

**APP Torch Down Applied** – APP Torch Down Applied Modified Bitumen is a non-oxidized (flux) asphalt, blended with various thermoplastic atactic polypropylene polymers and co-polymers. Non-woven polyester mat which is impregnated and coated with a superior grade, modified bitumen compound.

## Additional Products

### Wood Shakes & Shingles

**Wood Shakes** - Wood Shakes are Hand Split and typically made from Western Red Cedar and Yellow Cedar. Wood Shakes are Hand Split to reveal the uneven natural grain of the wood. Applied over spaced sheathing and felt allows the shakes to breathe naturally and therefore does not require ventilation. The most common lengths are 18" and 24". Hand Split Wood Shakes also come in different thicknesses known as Medium or Heavy. Hand Split Wood Shakes can also be Fire Treated but typically the Fire Resistant capabilities usually wear off after 5 years due to weathering and sun exposure.

**Wood Shingles** - Wood Shingles are Machine Sawn and typically made from Western Red Cedar and Yellow Cedar. Wood Shingles are thinner than Shakes and are Tapered and sawn on both faces of the shingle for a more uniform appearance. Applied over spaced sheathing to breathe naturally and therefore does not require additional ventilation. The most common lengths are 16" (known as "Five X"), 18" (known as Perfections) and 24" (known as "Royals"). Wood Shingles also come in different grades known as No.1 Grade Blue Label, No.2 Grade Red Label, No.3 Grade Black Label, and No.4 Grade Green Label. No.1 Blue Label being the best of the grades. The grade determines the quality and chances of warping over time. Wood Shingles can also be Fire Treated but typically the Fire Resistant capabilities usually wear off after 5 years due to weathering and sun exposure.

To Whom It May Concern:

David Martin & Son Roofing has been doing business with Bradco for almost 8 years.

They are a family owned and operated company. They only use high end roofing products and accessories that exceed industry standards. Thus making them one of the most sought after companies in the Dallas Fort Worth metroplex. Word of mouth has been one of there sole sources for advertising. I have personally built a friendship/work relation that will truly last a lifetime. They have been a pleasure to service and I feel blessed to have them as one of my top accounts.

Sincerely,

April 2, 2009

Dear David,

This is just a note to acknowledge the impressive operation and work of your roofing team. An amazing process to witness!

When the men arrived, I could not believe the speed and focus of getting the old roof off in order to prepare for the application of the new. While it sounded on the inside, as though we were being attacked by aliens (I kid you not), the men worked quickly and efficiently so that this portion of the process was soon over. What a mess it was with all that was pulled off!! And yet at the end of each day, the piles of debris were swept up and out of the way. It was amazing.

As the new shingles were put on, it was obvious that everyone had their niche of skills, and all appeared to work together in harmonious fashion. There was a fellow in the back who worked to make sure that the tricky valleys and corners where water problems had once occurred were given the needed attention. Care was given to clear the driveway of roofing nails (no flat tires!), and exhaust pipes for hot water and heater vents were reattached.

The foreman was responsive to questions and concerns along the way. Paperwork with the mortgage and insurance companies were handled professionally. A desire to do it right and satisfactorily was evidenced throughout.

Thank you David and thanks to all involved - for a job well done.

Sincerely,

  
Sally S. Griggs

*Dearest David*

*I just had to write and tell you what a great experience it was to meet and be cared for by all of you. Each one of you has an important job with your business and you do it well. I was impressed and pleased and felt very "cared for" which is rare in this day and age. If we had a concern you not only answered your phone but came a runnin'.....with help! WOW & WOW!*

*The entire operation of the Baiocco Roof was like a performance of sorts. The supplies quietly arrived, & the trailer was placed out front.....like a teaser event. Then one day the "boys" arrive and the sounds begin. Strange sounds & everlasting sounds. I would peek out at the "boys" because I am interested in what and how they do their art.....it is fascinating to watch them and I know you give them words of praise for the good job they do! What they do is an art form of movement and design. Each step had a purpose and plan. I loved watching all of this and applaud your work ethics and standards!*

*I loved how the players set us up and did their thing from Walt to Charlie to Dana and so on with Delfino and Regel backing up each and every move.....and always those hard working "boys" and of course David cruising by at all hours to keep abreast..... Please have someone tell the "boys" how much WE appreciate their talents and efforts as well as your own!*

*Thanks for all you do and did and will continue to do! I just wanted you ALL to know that your efforts did not go unnoticed by me.*

*And the best part of this entire deal is that I ~~got~~ to meet each one of you in addition to getting a fabulous new roof!*

*Sincerely and with much admiration - Jesse Baiocco*

*PS. Sam is not wordy and just says thanks, good job!*
