

Mice Corrective Treatment

Remove everything from the bottom cabinets in the kitchen and bathroom: dishes, food, and other small items or appliances. This will allow us to inspect and treat more areas.

All appliances (stoves, refrigerators, microwaves and toasters) and surrounding areas must be cleaned to eliminate possible mouse food sources.

Store dry food goods (rice, flour, cereals, pasta and other snacks) as well as pet food in rodent proof containers, such as metal/ plastic containers or move these items to higher shelves where mice cannot get into them.

There should be a clear path of access for the exterminator to inspect and treat any areas where pests have been seen.
