Comments
& Location

In signing and accepting this permit for dust control, I agree to abide by all of the conditions contained herein and assume full responsibility and liability for private application of dust control material on the above described portion of public highway in Linn County, Iowa. The Contractor/ /Applicant/Licensee/Consultant/Owner or Assigns expressly agrees to indemnify, defend and hold the County, its directors, officers, and employees free and harmless from and against any and all loss, liability, expense, claims, costs, suits, and damages including attorney's fee, arising out of Contractor's/Applicant's Licensee's/Consultant's/Owner's or Assigns' operation or performance under this agreement.

I agree to Hold Harmless Agreement above.

AGREEMENT TO CONDITIONS OF DUST CONTROL PERMIT

The Linn County Board of Supervisors has adopted the "Linn County Dust Control Policy" for secondary roads. Individual participation in the program is in accordance with the following conditions.

- 1) Material used on any public highway may be any of the following:
 - a) Calcium Chloride (CaCl₂)
 - b) Magnesium Chloride (MgCl₂)
 - c) Lignin Sulfonate (Tree Sap)
 - d) Soy Oil
 - e) Seal Coat
- 2) Effectiveness of material is not the responsibility of Linn County. Calcium Chloride, Magnesium Chloride and Lignin Sulfonate are still effective with light blading.
- 3) Notify the County Engineer's Office seven calendar days in advance of the work. Linn County prepares all roads in the spring to repair winter damage and replace crown. Special requests for road maintenance prior to dust control application must be paid by the permit holder.
- 4) Applied at such rate that it will not splatter under traffic. Any puddles that are formed must be blotted with sand or chips immediately in sufficient quantity that product will not splatter under traffic. A heavier application may be made if desired, and the entire surface must be covered with sand or chips immediately in sufficient quantity that it will not splatter or splash under traffic. Application will conform to specifications in the "Linn County Dust Control Policy".
- 5) Application area must be at least 18 feet in width.
- 6) The Permittee understands that Linn County has no obligation to establish a unit price, or to furnish an inspector and assumes no responsibility for the work.
- 7) After the dust control has been placed, the Permittee is responsible for perpetually keeping the treated portion free of "pot holes" by filling them as they develop.
- 8) Linn County is not liable for blading through unpermitted or unmarked dust control sites. Permittees are required to maintain flags at their treated areas. Flags must be placed at both ends of the dust control section.
- 9) The Permittee understands that by acceptance of this Permit, the permittee assumes full responsibility for any and all liability resulting from this work on a public roadway.
- 10) The treated sections may be scarified and bladed at any time if it is determined by the District Foreman, Operations Superintendent or County Engineer that the surface has degraded to the extent that it affects travel.
- 11) Iowa law specifies that the purpose of a public highway is to serve the traveling public. Linn County reserves the right to scarify any treated section and maintain as a rock surface. The County gives the Permittee seven (7) calendar days notice (from date of mailing) to take care of holes or irregularities. If maintenance is not completed in seven days the road department will scarify road section and restore rock surface.
- 12) After sign up ends on **May 10th**, existing dust control, except seal coat in good condition, will be bladed to prepare the road and restore crown. Allow Linn County 10 calendar days before requesting to apply new dust control.
- 13) Late applications will not have the road prepared. The County will provide normal maintenance. Applicant is responsible to determine when the road is ready and to schedule the application of dust control material with the contractor.
- 14) This permit is valid until **Oct. 31st** of the year issued, and the County reserves the right to scarify all portions after this date without notice to the Permittee if in the County's opinion the surface will not remain reasonably sound throughout the winter and spring and may negatively affect travel and winter service.
- 15) The Board of Supervisors Policy for Fugitive Dust Control can be found at LinnCountyIowa.gov/Engineer

Permittee Signature - I have read the conditions of the permit.
