## Protect Yourself Against Spring Outages

Spring in Knoxville brings blooming dogwoods, warmer temperatures—and an increased risk of power outages. As beautiful as East Tennessee is this time of year, the season's severe weather can be unpredictable. High winds, heavy rain, and intense thunderstorms are common across the region, often knocking down trees and power lines, damaging transformers, and leading to sudden blackouts. For Knoxville residents, losing power isn't just inconvenient—it can be costly and even dangerous. Food spoils quickly, sump pumps fail (putting basements at risk of flooding),

and home medical equipment may stop working. That's why more local homeowners are turning to **Generac standby generators**. These systems automatically detect an outage and restore power within seconds—no need to be home or manually start anything. Powered by natural gas or propane, Generac generators offer a safe, hands-free solution that keeps your lights on and

your home protected through any storm. Whether you want to back up your entire home or just essential circuits, there's a Generac model to fit your needs. With spring storms already rolling through East Tennessee, now is the time to prepare. Don't wait for the next outage—invest in reliable backup power and enjoy peace of mind all season long. Call us today to get your free quote for a Generac Generator!

## Summer Is Around the Corner

Preparing your HVAC system for the summer heat is essential for comfort, efficiency, and reliability. As temperatures rise, your system must work harder to keep your home cool. Without proper maintenance, issues like clogged filters, low refrigerant, or dirty coils can

lead to breakdowns and higher energy bills. Scheduling a professional inspection ensures everything is functioning correctly and helps prevent costly repairs. Don't wait until a heatwave strikes—take steps now to make sure your HVAC system runs smoothly all summer long.
