ABOUT JG ENVIRONMENTAL

WHO WE ARE & WHAT WE BELIEVE

JG Environmental provides on-time and on-budget solutions in cleaning, hauling and disposal. We service municipal, commercial and industrial customers throughout Pennsylvania, Maryland, New Jersey and Delaware. For more than a decade, we have been providing clients with safe, strategic and cost-effective solutions that comply with the strictest environmental standards which meet or exceed your operational needs.

Our fully licensed and insured team of specialists are dedicated to earning your trust through honesty, integrity and hard work. We promise that every job we perform will receive the personal attention you deserve.

JG Environmental is proud of our certifications and professional affiliations including:

- Confined Space Area Certification
- Lock Out/Tag Out Certification
- Certified OSHA 40
- ISN
- Manheim Chamber of Commerce
- Lancaster Chamber of Commerce
- Carwash Association of Pennsylvania

Locally owned and family operated, JG Environmental provides municipal, commercial and industrial clients with cleaning, transportation and disposal solutions that exceed

expectations in a safe, strategic and cost-effective manner. Count on our expertise, experience, competitive pricing and on-time solutions for your waste management needs.

WASTE TRANSPORTATION

FULL-SERVICE WASTE TRANSPORTATION

When you need prompt waste removal services, you can rely on our staff to complete the job efficiently and professionally.

Solid Waste Transport

We offer 20 and 30-yard open-top containers for solid waste collection and disposal. These are ideal for construction, demolition, remodeling and municipal projects as well as manufacturing needs and all other generators of solid waste. With competitive pricing and timely service, our solid waste transportation program provides customers peace of mind when it comes to collection and disposal.

Choose From a Variety of Roll-Off Services

JG Environmental provides customers with a variety of roll-off service options, including:

- Dumpster Delivery
- Dumpster Removal
- Waste Transportation
- Disposal
- Cleaning
- Vacuum boxes
- 10K frac tanks and Weir tanks
- De-watering containers

Our Galbreath 70k systems allow us to safely and efficiently transport containers wherever you need them to go.

Liquid Waste Transport and Disposal

JG Environmental is permitted, licensed and insured to pump, transfer and dispose of nearly all non-hazardous industrial liquid waste streams at more than 10 residual and municipal facilities to ensure maximum efficiency and competitive budget considerations.

Wastewater and Sludge Removal/Disposal

Our vacuum trucks, trailers, GapVax equipment and trained professionals, allow us to offer top-quality wastewater removal and disposal services.

Our current equipment fleet includes:

- 6-Vacuum Tankers
- 1-TurboVac
- 1-GapVax Jet Vac Combination
- 2-GapVax HV56 Hydro-Excavators
- 3-Roll Off Trucks
- 3-Field Services Support Vehicles
- 1-Line Opening Jet Truck

WASTE DISPOSAL

PROFESSIONAL WASTE DISPOSAL SOLUTIONS

JG Environmental is pleased to offer waste processing and disposal at our newly constructed DEP approved 12,500 square foot facility. Conveniently located in beautiful Lancaster, PA, we are easily accessible from Route 30 and Route 283, making this facility ideal for the unloading of bulk loads on tankers and hi-vac trucks, drum and tote loads, vacuum boxes and dumpsters.

Our on-site truck scale, load verification and truck washout services make JG Environmental's facility an efficient resource for non-hazardous residual and municipal waste streams for stabilization and disposal.

With our two 8,300-gallon pits and increased capacity, we can service and manage large projects. Our fully integrated waste transportation and field services teams work seamlessly with our disposal facility to offer comprehensive solutions for our customers.

Food Waste Disposal

We are permitted to haul food grade waste to more than half a dozen strategically located DEP approved farms in Lancaster, Lebanon and Chester Counties for Benficial Use. A manifest stating quantity, location and permit number are provided with each load.

CERTIFIED SHREDDING SOLUTIONS

Our newly installed SSI industrial shredder is ideal for destroying off-specification, expired and damaged products securely and effectively. This process allows us to destroy four 55-gallon drums of product at a time, and can efficiently handle non-hazardous waste of all shapes and sizes. We handle bulk solids and liquids, drums, totes, cubic yard boxes, consumer packaged goods and more.

Once the material is shredded into one of our mixing pits, it is then blended and solidified for disposal. Our blends are permitted for burial or incineration, and upon completion, we offer both Certificates of Destruction and Witness Destruction options for your audit trail.

Reasons for product destruction:
When these items are not properly destroyed, outdated and off-spec products often end up in the “Gray or Black Markets”, where people sell your products illegally for personal benefit. Industrial shredding eliminates the risk of such products re-entering the marketplace. You can count on the experts at JG Environmental to safely, securely and discreetly pick up, destroy and dispose of your waste.

Some industries we serve include:

- Food and Beverages
- Pharmaceuticals
- Nutraceuticals and Vitamins
- Cosmetics and Beauty Aids
- Healthcare Products
- Consumer Packaged Goods
- Label Rolls
- Toys
- Branded Apparel
- Confidential Documents and Sensitive Materials

ADDITIONAL SERVICES

STORM WATER MANAGEMENT

Keeping storm water systems clean and flowing efficiently can be challenging unless you have the right equipment. Our 80-gallon per minute combination jet/vac trucks are the ideal way to maintain optimal storm water systems.

Through vacuum and high pressure water, we are able to effectively clean catch basins, removing grit, leaves and other debris. Our 600', 1" high-pressure jet hoses also allow us to "jet" the inflow lines and outfalls from 6"-48", leaving a clean, well operating storm water system.

Systems We Service:

- Terre-Kleens
- Culverts
- Inflow and Outfall Lines
- Catch Basins and more

Our trained professionals at *JG Environmental* are ready to handle all of your line jetting needs whether it be routine maintenance, or an emergency line opening.

DRY WASTE VACUUM SERVICES

Our industry-leading GapVax trucks offer serious problem-solving capabilities for our customers.

Our trucks feature three-stage filtration which allow us to vacuum dry material no matter how light it may be.

Featuring a 15-yard debris body, our GapVax trucks and experienced certified operators and technicians are capable of tackling even the biggest dry material spills and contamination issues.

HIGH-PRESSURE LINE JETTING/TELEVISION

Materials can stick to the inside of transfer and drainage pipes and over time will lower the flow rate and efficiency of the piping system. Our advanced high-pressure, high-temperature line jetting systems make it possible to clean out even the toughest build-up on inside surfaces to restore efficiency and reliability to the system.

Our televising systems allow us to push or drive a camera through the line to visualise the problem. Optional video recording allow us to leave a copy of our findings with you when the work is completed.

COMPREHENSIVE TANK SOLUTIONS

Utilizing industry specific equipment and trained professionals, *JG Environmental* offers comprehensive tank cleaning services for industrial, commercial and municipal applications, including:

- Aeration tanks
- Digesters
- Holding tanks
- Grit chambers
- Equalization tanks
- Batch tanks
- Mixing tanks

Car, Truck and Equipment Wash Systems

Specifically designed to handle heavy liquid residual waste like truck wash sludge and grit, our vacuum trucks, with tilting bodies and high-pressure water wash-down systems, are ideal for servicing wash bay troughs and separator tanks.

Confined-Space Entry

Our confined-space trained and certified technicians paired with our safety practices, ensure the safest and most responsible solutions for all confined space needs. Regardless of size or configuration, our advanced vacuum equipment, 200°F pressure washing systems and confined space/lockout tag-out certified teams are ready to meet your needs.

HYDRO EXCAVATION

Hydro excavation is a process of removing soil using high pressure water and vacuum. It's ideal for locating underground utilities such as gas lines, electric lines, sewer lines and fiber optics. Hydro excavation is also beneficial for excavating fence posts, telephone poles, infrastructure repair and other applications where sensitive utilities may be buried.

Benefits of Hydro Excavation

Hydro excavation avoids damage to underground pipes, lines and cables. Our powerful GapVax vacuum trucks are able to safely and efficiently locate underground utilities prior to mechanical excavation.

CONNECT WITH US

CONTACT INFORMATION

JG Environmental is conveniently located in Lancaster County, Pennsylvania only minutes from major interstates and thirty minutes from Harrisburg. We are less than an hour and a half drive from Maryland, Delaware and New Jersey.
