NO ONE DELIVERS MORE

YOUR PERFORMANCE, OUR TOP PRIORITY

New LPG Cushion Tire Forklifts Engineered To Do More **35/45/55LC-9 Series**

The new LC-9 Series offers unrivaled performance and innovative features all engineered to bring owners greater productivity, enhanced reliability, and lower costs. Powered by a reliable Kubota engine, the LC-9 matches outstanding fuel efficiency with EPA/CARB certification in a compact design with the durability to handle virtually any application.

Environmentally friendly

- The Kubota WG3800 LPG engine delivers stable performance with low emissions.
- Meets EPA/CARB standards and offers low fuel consumption, supporting eco-friendly worksites.
- Consistent power and smooth operation enhance productivity in various applications.

Greater productivity & durability

- Optimized powertrain and cooling systems maintain reliable performance under heavy workloads.
- Long-life wet disc brakes and reinforced drivetrain components reduce wear and extend service life.
- A compact front-end structure and small turning radius enable smooth maneuvering even in narrow aisles.

Enhanced safety

- Automatic parking brake and operator-presence features help prevent unintended movements.
- Real-time load information and adjustable speed settings support safer, more controlled operation.
- Certified safety systems ensure dependable protection for both operator and equipment.

Outstanding operability

- A spacious, well-designed operator area and suspension seat reduce fatigue during long shifts.
- Convenient controls and improved visibility features support smooth, precise handling in all directions.

Easy servicing

- Simplified maintenance points and clear service alerts reduce downtime and help lower costs.
- Water- and dust-protected electrical components enhance reliability in harsh environments.
- Wide-open service access allows faster, easier routine inspections and repairs.

Eco-friendly without sacrificing productivity and durability

The LC-9 is engineered to deliver superior performance in the most demanding of environments and applications. The eco-friendly engine delivers superior fuel economy while the optimized powertrain and cooling systems offer greater reliability.

ENVIRONMENT FRIENDLY
GREAT PRODUCTIVITY, DURABILITY

Eco-friendly Kubota WG3800 LPG engine

EPA/CARB-certified WG3800, based on a same-class diesel platform, delivers consistent performance with low noise and efficient fuel use. A catalytic converter reduces exhaust emissions, and the compact engine design creates more service space in the engine bay.

- Displacement : 3,769cc (4cyl)
- Rated Power(hp/rpm) : 91.8hp / 2,450rpm
- Max. torque(lbf-ft/rpm) : 214lbf-ft / 1,200rpm

More compact design with a reduced front overhang

The staggered mast rail design keeps the load closer to the front axle, shortening front overhang and overall length. This improves turning in tight aisles and increases stability by keeping the load nearer the truck's center of gravity.

35/45/55LC-9 (Staggered Type)

TRANSMISSION & DRIVE AXLE

Smooth Shifting Transmission

The transmission uses precision clutches and high-strength gears for durability in heavy, continuous use. Optimized gear ratios deliver smooth shifting and stable power while reducing friction and heat to extend drivetrain life.

Rugged Drive Axle

The drive axle is built for high torque and frequent load changes, with a reinforced housing and high-strength components to reduce wear. Dual planetary reduction delivers strong, smooth torque for excellent traction and control, while optimized bearings and efficient lubrication improve durability and simplify maintenance..

Transmission & drive axle oil circulation system

A shared oil circulation system connects the transmission and drive axle for better cooling and component protection. Oil checks and filling are done at the axle, improving durability and reducing maintenance time.

Wet disc brake

The wet disc braking system uses increased axle oil volume for rapid heat cooling, providing consistent braking and long service life in high cycle applications.

Short wheelbase for enhanced maneuverability

The short wheelbase improves maneuverability without sacrificing travel stability. An optimized steering system boosts durability and control.

A wide view for work

Cylinder and hose routing are positioned to keep the operator's forward view clear during lifting and travel. Rear visibility is improved with a panoramic mirror and an available rear camera to help monitor blind spots and improve awareness when reversing.

Clamp interlock function (Option)

When using attachments like paper roll clamps, box clamps, or drum clamps, this feature helps prevent load drops caused by operator error. It automatically limits unnecessary or unsafe functions during attachment use, reducing accident risk and improving overall safety.

Pedestrian detect alarm system (Option)

The system uses a rear camera and in-cab monitor for pedestrian detection. When a person is detected, the screen highlights them with a detection box and an audible alarm alerts the operator, improving awareness and helping prevent accidents during reversing and maneuvering.

Auto parking

If the engine stops or OPSS activates, the parking brake automatically engages to reduce operator error and help prevent unintended movement.

Fork lowering safety

During lowering, a down-control valve regulates descent speed for smooth, controlled operation. A down-safety valve helps prevent sudden fork drop if a hydraulic line is damaged.

Operator presence sensing system

The OPSS restricts travel, lift, and tilt functions when the operator leaves the seat to help prevent accidents.

Load weight indicator

A load pressure sensor displays estimated load weight in real time. If the load exceeds the set limit, the cluster shows a warning. Readings may vary, so it's intended as a reference to support safer operation, help prevent equipment damage, and improve load handling efficiency.

Speed limit

The multi-function monitor lets you set a maximum travel speed to match site safety limits, reducing the risk of over-speed accidents. Even with speed limiting enabled, the truck maintains strong driving and working performance.

Seatbelt interlock (Option)

If the seat belt is not fastened in the proper start-up sequence, or if it is unfastened during operation, the truck stops functioning. This system helps protect the operator by preventing operation without the seat belt worn.

An operator's compartment with a focus on productivity & comfort

Outstanding ergonomics create an operating space where productivity, comfort, and safety are assured. From the full-suspension seat to the carefully positioned controls, the LC-9 offers greater convenience and control over even the longest workdays.

Multifunction digital cluster

The multifunction digital cluster displays key operating conditions in real time for quick, easy visibility. A standard LPG low-fuel alarm helps prevent unexpected shutdowns, and additional built-in features support safer, more convenient truck management.

BCS (Box Car Special) (Option)

With a compact counterweight, the BCS option improves maneuverability and stable handling in tight spaces. Ideal for railcars, containers, and narrow aisles, it delivers smoother turns, better control, and higher productivity where space is limited.

Shorter overall length and smaller turning radius depending on CWT difference
- Overall length: reduced by 2.3in - Minimum turning radius: reduced by 2.2in
* Based on 35LC-9 Standard & BCS models

Full-suspension seat

The full-suspension Grammer™ seat adjusts to the operator's weight for improved comfort. Optional features include a seat belt switch, armrests, and a seat heater.

Knob on switch & horn (Option)

A forward/reverse switch and horn button are mounted on the lift lever for quick direction changes and fast emergency response, helping reduce operator fatigue.

Electronic parking switch

A single switch lets the operator apply or release the parking brake quickly, simplifying daily operation and improving convenience.

Auto tilting (Option)

During tilt, the forks automatically stop when they reach level (parallel to the ground). This improves safety and efficiency when placing or removing pallets from racks at higher lift heights.

Steering handle

The compact 11-inch steering wheel is designed for easy control with less arm and shoulder strain. It helps reduce fatigue during long shifts while improving comfort and productivity.

Rear grip bar & horn

A rear grip bar with an integrated horn button helps the operator maintain a secure, comfortable posture when traveling in reverse. The horn can be activated quickly without changing hand position, improving awareness in tight areas.

Large maintenance space

A spacious service area is available for easy access to key consumables and major functional components. Simply open the engine cover and remove the side cover and floorplate to perform follow-up maintenance quickly and efficiently.

Easy service MCV

The main control valve (MCV) is mounted horizontally, allowing hydraulic pressure adjustment and spool replacement without disassembling or opening the MCV assembly.

- Embedded flow regulator - Easy to regulate the lowering speed
- Embedded emergency screw - Allows mast lowering in an emergency situation

EASY MAINTENANCE
COST-EFFECTIVE SERVICE

Maintenance management

The cluster displays replacement reminders for consumables like the engine oil filter and air cleaner based on the service intervals in the manual, helping prevent performance loss from overdue maintenance.

Engine failure control

The cluster can display ECU-stored engine fault codes without additional tools, enabling faster, more accurate troubleshooting and service.

Waterproof fuse & relay box

Fuses and relays are housed in a water- and dust-tight box in the engine compartment to protect against contamination and reduce maintenance downtime.

Detachable radiator cover

A tool-free plastic radiator sub-hood on the counterweight, separate from the main hood, speeds coolant level checks and top-offs, reducing downtime..

LPG fuel level warning

When LPG tank pressure drops below the set level during operation, the fuel symbol lamp illuminates on the cluster to warn the operator and help prevent running out of fuel during work.

Quick coupler (Option)

An optional hydraulic quick coupler allows fast, secure connection of mast-mounted hydraulic attachments for quicker, safer attachment changes.

LPG swing down bracket (Option)

The swing-down LPG tank bracket hinges the cylinder down to ground level for safer, easier replacement without heavy lifting. It reduces operator strain, speeds tank changes, and helps improve productivity.

SPECIFICATIONS (35/45/55LC-9)
