

Help find potential treatment options for Alzheimer's disease

Roche

Learn how YOU can help the TRONTIER 1 study

What is Alzheimer's disease?

Alzheimer's disease is a medical condition caused by changes in the brain and affects an individual's memory, behaviour and daily activities. These changes in the brain are thought to be linked to the build up of two proteins: beta-amyloid and tau. You can think of this build up like roadblocks in the brain, making it harder to think, remember, or speak. Scientists are continuously trying to find potential treatments, including new study drugs, to slow down or stop these changes.

What is mild cognitive impairment?

Mild cognitive impairment means having problems with memory and thinking skills that are unlike usual age-related changes.

What is the TRONTIER 1 study?

The TRONTIER 1 clinical study aims to determine if an experimental drug can help slow down Alzheimer's disease. TRONTIER 1 will include approximately 800 adults who have a recent diagnosis of mild cognitive impairment or mild dementia due to Alzheimer's disease.

Do you or someone you know:

- Struggle to remember everyday details?
- Experience memory loss more frequently?

We all experience these issues from time to time, but if you or someone you know is experiencing them more often it may be an early sign of Alzheimer's disease or mild cognitive impairment.

Join us in the TRONTIER 1 study to help advance Alzheimer's disease research

TRONTIER 1

Models depicted

Why should you participate in TRONTIER 1?

- By taking part you will help future generations to live in a world with better treatments for Alzheimer's disease
- Your memory and overall health will be regularly checked
- The study team will provide you with information about Alzheimer's disease

There are potential risks and side effects by participating in this study. It is important to talk to the study team about these before you decide to join.

What will happen if you participate?

- You will attend study visits at the study site
- You will take memory tests and have regular study-related health check-ups
- You will need a study partner, such as a family member or caregiver to support you

Your participation is voluntary, and you can stop at any time!

You may be eligible for the TRONTIER 1 study if:

- You are between the ages of 50 and 90 years
- You are showing early symptoms of mild cognitive impairment or Alzheimer's disease, or have already been diagnosed
- You are able to attend study visits with a study partner for 18 months

Not everyone will be suitable for this study, please discuss with the study team.

Help us make a difference in Alzheimer's disease research by joining the TRONTIER 1 study

To learn more about TRONTIER 1 or if you have any questions, please contact a member of the study team.
