

Curodont™ Repair

Stop Cavities Early

Cavities starting? We can stop them early.

A simple, drill-free treatment that helps repair your teeth starting with one application.

Most cavities begin as small areas of mineral loss in your enamel. If we catch them early, we may be able to reverse the damage without any drilling at all.

Our enamel repair treatment restores lost minerals using a formula that penetrates the full depth of the lesion, not just the surface.

What to expect

- Less than 3 minutes to apply, gentle
- No needles, no drilling
- Done right at your existing dental visit
- Suitable for all ages
- Non-staining and tasteless

Good for your teeth. Easy for your schedule.

- Helps stop early cavities from progressing
- Supports your tooth's natural repair process
- Protects healthy structure, no filling needed
- Works on all tooth surfaces
- No extra appointment

How it works

Applied directly to the affected area, a specialized formula guides minerals to reform deep within the enamel — rebuilding from the inside out, the way nature intended.
