SKIN CARE PROGRAM

1000 CLOCK HOURS | 40 - 56 WEEKS TO COMPLETE WITH PERFECT ATTENDANCE

PROGRAM DESCRIPTION:

The study of skin care, or esthetics, involves the science of skin care, body care, hair removal and makeup. The school program is based on European skin care traditions and American technology. Our program prepares the student not only for State Board licensing requirements but also for the professionalism needed in today's skin care work environment. Students will learn advanced concepts in the program which exceeds the Georgia State Board requirements for licensure. This is accomplished by providing students with contemporary and technologically advanced information in areas of clinical and medical esthetics. This training will add to the fundamental skill sets and provide students with additional tools to build upon during a career as a licensed aesthetician. The Skin Care Program NOW offers Certification for Dermaplaning and Microneedling in the Curriculum. Additionally, you will be certified on product knowledge for Medical Grade Peels! Once a student enters the Senior section of the program, Advanced courses will be added to an already amazing curriculum.

The following represents insight regarding licensure and certification in the clinical and medical esthetics field. Currently - the state of Georgia does not grant nor recognize a "medical aesthetician" license. Currently there are a few states in the U.S. that grant a separate medical aesthetician license apart from the state aesthetic license. These states require additional training and hours to receive this type of licensure

Licensure is defined as: *official or legal permission to perform a craft, trade or service recognized by national, state, or international laws and guidelines.* Upon completion of the training at the school and the required exit formalities, students will be eligible to sit for the state board exam to receive an esthetician license. This license is issued by state authorities and is recognized in the United States. Although the hour requirements may vary from state to state this is a transferable license.

At the completion of the training, the students are awarded certificates for completion in certain subjects, equipment training and practical skills. These certificates will be awarded to students providing:

1. Academic and financial standing is maintained throughout the program
2. Students have satisfactorily completed the required course material
3. The instructor has approved of your performance to receive the certificate

These are “certificates of completion” under the school’s guidelines for our specific classes and equipment use. They are important for a career resume as accolades and accomplishments. However, they should not be compared to or considered “licensure” or advanced certification as a final means for a particular aspect of training.

Certification is defined as: *an official document that gives proof and details regarding educational achievements and authenticity of training.* There are also many manufacturers and individual aesthetic firms that offer “certification” for their product and equipment training; however, this is not recognized as license to perform medical procedures or operate machines deemed as clinical that may require a medical or nursing license.

PROGRAM OBJECTIVES

1. Provide the most current curriculum and procedural applications under the scope of practice as prescribed by the Georgia State Board of Cosmetology
2. To provide the necessary training to become a licensed esthetician in the state of Georgia, and present to the student the many career opportunities that may be available to the graduate under the license stature
3. To instill a sense of confidence and professional decorum, while inspiring students to recognize their abilities and potential in preparation for a career in the field of beauty and esthetics
4. To provide esthetic students with developmental tools to assist effectively communicating with their clients, assess client needs to perform services, and steps necessary in securing a clientele
5. To encourage the sense of community, teamwork, and graciousness as to anticipate in the work environment in the professional field
6. To introduce and demonstrate the art of spa makeup and the varied career opportunities in the fashion and beauty field as a makeup artist
7. To introduce and present varied techniques, sciences, and applications in the art of waxing and hair removal
8. To provide the student with a fundamental understanding of anatomy, physiology, and sciences in addition to the introduction to business practices, including marketing, finances, legal issues, and business planning

ESTHETICS EQUIPMENT AT ISSNMT (Subject to change)

- Skin for Life: Nue Skin Microdermabrasion with Skin for Life: LED Light Emitting Diodes Attachments
- Skin for Life: Microcurrent & MyoLift 600 Microcurrent
- Skin for Life: Ultrasonic Skin Scrubber
- Dermavista: Diamond Microdermabrasion with Dermavista: LED Panel Diode
- Dermatouch: Particle Microdermabrasion
- Dermavista: Countour Ultra Microcurrent and Gala: Galvanic and Iontophoresis
- Celluma FACE
- Rejuva Fresh 6 in 1 Professional Hydro Dermabrasion Machine [Radio Frequency, Ultrasound, Cold Hammer, Spray Toner, Hydra Dermabrasion, and Ultrasonic Skin Scrubber
- Equipro Vapoderm 11100
- Equipro Modular Column: Infraderm (High Frequency), Ioniderm (Galvanic), and Areoderm (Vacuum)
- DYNATRONICS Synergie LT Light Therapy
- Equipro Visiderm Skin Scope

SKIN CARE PROGRAM THEORY

APPRENTICE

Professional Image and Life Skills	Communicating for Success
Tools and Equipment in the Treatment Room	Sanitation and Sterilization
Fundamentals of Nutrition	Principals of Infectious Disease Control
