

# STRENGTH THAT LASTS.

STRONGER HINGES.  
STRONGER DOORS.

C.H.I. Overhead Doors are built to last! Using 14-gauge steel hinges as standard on every residential door model — up to 50% thicker than the 18-gauge hinges used by many competitors.

## **Greater Durability**

Heavier-gauge hinges handle stress better, reducing wear, and extending the life of the door.

## **Smoother Operation**

Stronger hinges keep doors properly aligned, delivering quieter, and more reliable performance over time.

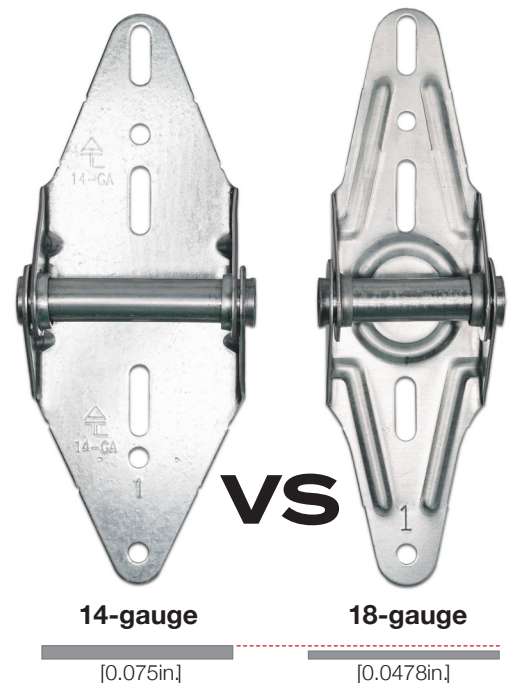

## **Fewer Service Calls**

Less flexing and bending means fewer hinge failures, less downtime, and lower long-term maintenance costs.

## **Peace of Mind**

Every door comes with commercial-grade strength built in — no need to “upgrade” to get the quality you deserve.

*Premium durability  
is standard  
...not optional.*
