

Deep Seal

Environmentally Safe

DEEP SEAL 13 Reasons

1. Concrete receives an integral waterproofing, even against internal migration
2. An effective and immediate halt to contaminant ingress from any direction
3. Significantly and immediately increases precast, mortar, grout and concretes density
4. Increases and / or reinforces concretes compression and flexural strengths
5. Immediately significantly diminishes permeability
6. Greatly lowers and / or eliminates water or gas vapor emissions
7. Virtually eliminates vapors such as radon, etc.
8. Internally produces an effective permanent colloidal silicate barrier
9. Effectively halts / prevents alkali-silicate reactions in new or old concrete
10. Eliminates dusting potential for new or old concrete
11. Provides significant additional surface abrasion resistance
12. Provides increased surface bond quality without detriment to traction quality
13. Eliminates delayed ettringite formation (DEF) potential, etc.

DEEP SEAL is also

- Non-Toxic
- Zero VOC or VOS Content
- Environmentally Safe
- User Friendly
- Odorless
- Non-Flammable
