

# *Facts on* **MULTI-FLUE CHIMNEY CAPS**

A multi-flue chimney cap is the smart choice for homeowners for a number of reasons. It provides complete, proper protection for your chimney from weather and animals and is custom built to match your unique home's color and architecture. A multi-flue cap covers the entire top of your chimney. These caps keep rain, snow and ice off the chimney crown and shed water away from the chimney structure.

Give your home added curb-appeal with an immediate upgrade today.

A properly sized full multi-flue chimney provides complete coverage for every flue in the chimney and is custom-built to match your home's style and color scheme.

Fireplaces and gas appliances often share the same chimney which can lead to the installation of a variety of caps.

Copper, overtime, develops a beautiful patina that ages beautifully.

Smaller caps can leave a large portion of your chimney crown unprotected and can lead to an irregular appearance.

Both stainless steel and copper caps feature lifetime warranties.
