

HOW IT WORKS

Armor Pro is a liquid humic acid coating designed for application to dry fertilizer to improve soil health and nutrient availability. Its patent-pending formulation provides superior adhesion to urea granules, resulting in a more uniform coverage. This reduces clumping and sticking, allowing treated granules to remain free-flowing during handling and application. When applied, Armor Pro delivers agronomic benefits by stimulating beneficial soil microbial activity, and increasing the availability and uptake of key nutrients to support early-season crop performance and season-long nutrient availability

BENEFITS

1. Uniform coating and coverage
2. Reduced clumping and improved flowability
3. Enhanced soil CEC and nutrient retention
4. Stimulates beneficial soil microbiology
5. Season-long increase of nutrient availability and uptake
6. Supports early-season crop performance
