

Humic Acids

0-0-5

Humic Acids are derived from leonardite, and have superior solubility in both low and high pH systems. The addition of Humic Acids to starter fertilizers can improve nutrient retention in the soil profile and give healthier, higher-yielding plants.

GUARANTEED ANALYSIS

Soluble Potash (K2O) 5.0%

Derived from: potassium humate

CONTAINS BENEFICIAL SUBSTANCES

ACTIVE INGREDIENTS

Humic Acids (derived from leonardite) 20.0%

INERT INGREDIENTS

Total other ingredients (from fertilizer material) 80.0%

APPLICATION RATES

Corn: 2-6 quarts per acre; two treatments per year in irrigation water.

Sorghum: 2-6 quarts per acre; two treatments per year in irrigation water.

Drip Irrigation: 6 quarts per acre; weekly treatments

Soil Application: 2 quarts per acre to promote absorption

Foliar Application: 1 quart per acre to promote absorption

TECHNICAL DATA

Net Weight:

Weight Per Gallon lbs/gal @68° F 9.6

Specific Gravity 1.15

pH at 68° F 9.0

Freezing Point 32°F

BENEFITS

- Improves soil structure
- Increases nutrient exchange & retention
- Stimulates microbial growth
- Improves nutrient absorption

NET CONTENTS:

☐ 2.5 gallons (24.0 lb) ☐ 265 gallons (2,544 lb) ☐ Bulk _____ gallons
