

0-0-4

Sweet Tea is a stable combination of fructose and glucose sugars manufactured from food grade sources.

GUARANTEED ANALYSIS

Soluble Potash (K_2O) 4.0%
Derived from: Potassium hydroxide

CONTAINS BENEFICIAL SUBSTANCES

ACTIVE INGREDIENTS

Fructose 26.0%
Glucose 34.0%
Maltose 1.0%

INERT INGREDIENTS

Total other ingredients (from fertilizer material) 39.0%

GENERAL INFORMATION

Sweet Tea is a blend of liquid sugar that supplies plants with carbohydrates and serves as a food source for microbes.

6.85 lbs of sugar/gallon = .86 lbs of sugar/pint

20 liquid oz of Sweet Tea = 1 dry lbs of sugar

APPLICATION RATES

1-3 pints/ac in-furrow, sidedress/top dress, or in foliar applications

TECHNICAL DATA

Net Weight:

Weight Per Gallon lbs/gal @68° F 11.23

Specific Gravity 1.34

pH at 68° F 5-7

Freezing Point -30°F

NOTE: Plants use photosynthesis to make sugar, which serves as an energy source, and is used to help plant growth. This process occurs only during daytime, as plants need sunlight to carry out photosynthesis. Carbon Dioxide, CO_2 , is absorbed by the plant through the stomata (small openings on the underside of the plants leaves) and water, H_2O , which is absorbed through the root hairs are combined in a chemical reaction, which produces glucose (also known as dextrose), or the sugar that plants use for energy.

Plants are able to store sugar in different forms, including maltose, sucrose, fructose, and glucose. They can convert sugars into starches.
