

Add-On Products

for Enhanced Water Quality

Every home's water is different, and some water conditions or personal preferences call for additional treatment beyond a single whole-house system. Our **Add-On Products** are designed to further enhance water quality, protect plumbing, and fine-tune your system for your household's specific needs. Based on your professional water test results and your family's water goals, your **Aqua Otter Water Technician** will recommend the appropriate combination of water treatment to deliver the best possible performance. These options allow us to customize your system—whether you're addressing harder water, sediment, or added peace of mind—ensuring your water is treated exactly the way your home needs it.

Water Conditioner Cartridge

Food-Grade Phosphate is widely recognized as one of the most effective no-salt water treatments in the industry because it addresses the true cause of hard water problems. Many inferior salt-free systems simply break hardness minerals into smaller particles—but a smaller problem is still a problem, and those minerals can continue to build up over time. The issue with hard water isn't the presence of natural minerals like calcium and magnesium; it's their "stickiness." **Food-grade phosphate** works by safely coating these minerals, changing their properties so they no longer adhere to pipes, fixtures, or appliances. Once coated, the minerals remain suspended in the water and flow smoothly through your plumbing system, preventing scale buildup while allowing you to retain the natural mineral benefits of your water—without damaging your home or equipment.

Aqua Otter's Water Conditioner Cartridge is designed to mount alongside your whole-house water system as the final stage of treatment. After filtration removes sediment and chemicals, this cartridge conditions hard water minerals to help prevent scale and protect your plumbing and appliances. We offer two cartridge sizes—2.5" x 10" and 4.5" x 20"—to ensure proper flow for your home, and each system includes the appropriate wrench for easy media replacement. Maintenance for the no-salt conditioning media varies based on water usage, hardness levels, and household size, and your **Aqua Otter Water Technician** will provide a personalized maintenance estimate during your free, no-obligation water test.

4.5" X 20"

Whole House Ultra Violet Light

Aqua Otter's Whole-House UV Water Treatment System provides an added layer of protection by using ultraviolet light to kill harmful microorganisms that may be present in your water. As water flows through the UV chamber, the light disrupts the DNA of bacteria, viruses, and other pathogens, preventing them from reproducing and causing illness—without adding chemicals or changing the taste of your water. We offer two sizes, 11 GPM and 21 GPM, to ensure proper flow and effective treatment for households of all sizes, giving your family safe, clean water at every tap.

11 gpm (41 lpm)
2.5 m3/hr

Port Size: 3/4" MNPT

Reactor Dimensions: 2.5" x 35.2" (6.4 x 89.5cm)

Shipping Weight: 15.0 lbs (.8 kg)

Lamp (Watts): 39

Power (Watts): 49

Max Current (Amps): 1

Controller Dimensions

Port Size: 1" MNPT

Reactor Dimensions: 3.5" x 36.1" (8.9 x 91.7cm)

Shipping Weight: 15.0 lbs (.8 kg)

Lamp (Watts): 42

Aqua Otter In-Line Spin Down Sediment Filter

HOW IT WORKS:

The **Aqua Otter 1" Spin-Down Sediment Filter System** with polyester filter screen makes solid particle removal simple and economical. The benefit of the 1" spin-down filter system is its ability to be cleaned and reused. The 1" spin-down sediment filter has a clear cover that can be easily removed for total cleaning. There is an unique tornado (spin-down action) effect created by the patented process. This is the elite solution for sediment, dirt, rust, and grit.

Product Height: 5"
Product Weight (lbs): 1.55
Max Temp (°F): 100°F
Connection Type: Slip

Product Length: 11-3/8"
Inlet Connection: 1" Slip
Outlet Connection: 1" Slip
Filter Type: SPIN-DOWN

Product Width: 5"
Max Pressure (Psi): 150
Cartridge Style: Spin-down
Flow Rate: 1-25 GPM
