Advanced Technology With Diagnostics

In combination with direct drive technology, **ProMatch Technology** and a diagnostic roller are used to measure and address vibrations from wheel assembly shape without having to take it out on the road to test. ProMatch guides techs through a simple process to identify and reduce correctable runout. The result is a smoother ride and fewer customer returns for rework.

Hundreds of hours of tech feedback led us to the E900 touchscreen interface that's designed for comfort and maximum productivity. It streamlines data collection, reducing manual input needed before the first spin
