

Finishline Fencing is the modern solution for property owners who want strength, safety, and long-term reliability without the drawbacks of traditional wire. Each strand delivers an impressive **1,250 pounds of breaking strength**, giving you the durability you expect while offering a safer, more flexible alternative for horses and livestock.

Installation is fast and straightforward. Finishline works with **T-posts, wood posts, or vinyl**, making it easy to integrate into new builds or existing fence systems.

Built to perform in any climate, Finishline withstands **UV exposure** and temperatures from –**40°F to 125°F**. Once installed, it requires **little maintenance**—very little tightening, no rust removal, and no corrosion control. Its advanced polymer construction ensures it will never rot, rust, or corrode, keeping your fence looking clean and performing consistently year after year.

Because Finishline contains **no metal wire**, **it significantly reduces the risk of cuts, entanglement, and other injuries**. It's a safer choice for animals, handlers, and anyone working around your fence line.

Finishline Fencing delivers strength, simplicity, and long-lasting peace of mind—making it the smart choice for today's farms and properties.
