

~Infrared Sauna~

Infrared is part of the sun's invisible spectrum of light that has the ability to penetrate the human tissue. Infrared heat therapy uses these infrared light characteristics to heat the body directly rather than just the air. Infrared saunas increase the body's core temperature resulting in a much deeper, more detoxifying sweat from the cellular level of the skin where many toxins are housed. Infrared heat is completely healthy and safe for all living things. In fact, infrared heat is so safe it is used in hospitals to warm newborns.
