Calix GigaSpire Router
## Setup Instructions
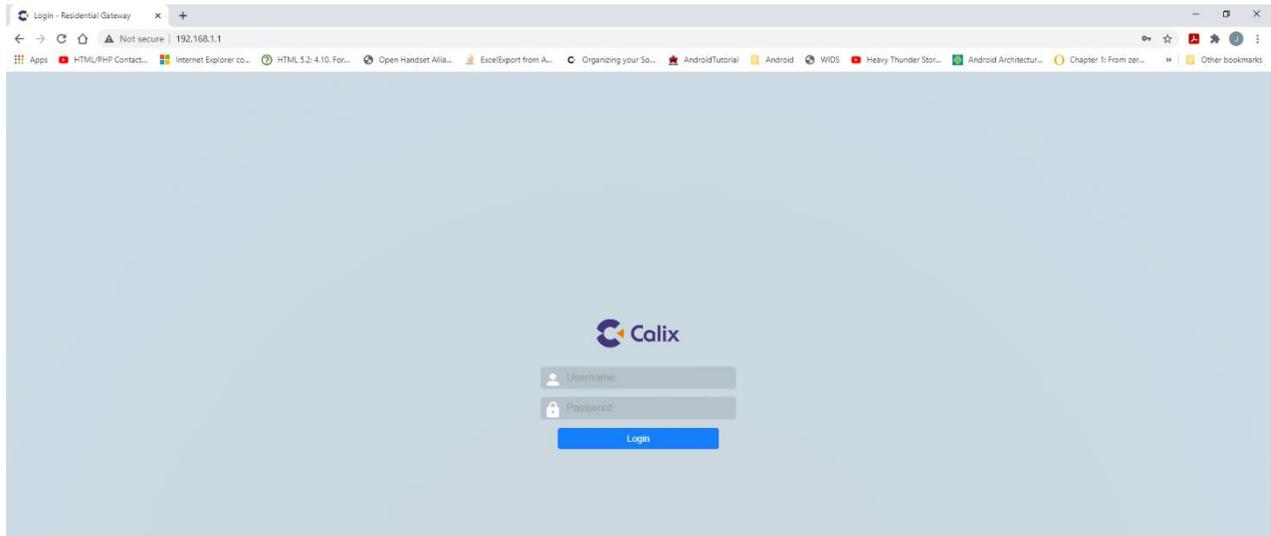

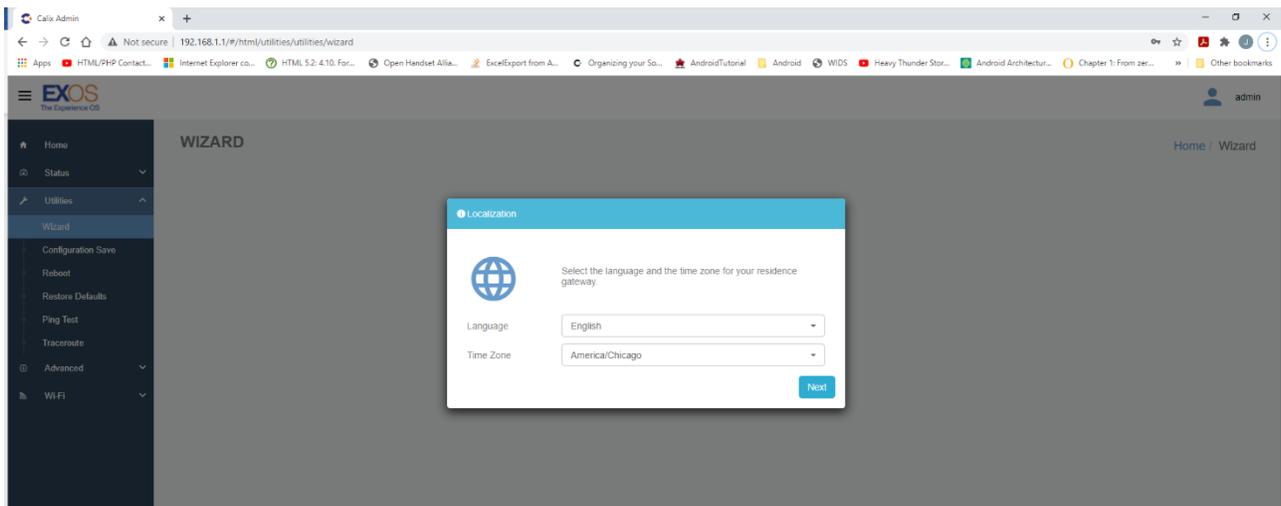

GigaSpire Initial Setup

1. Connect computer to GigaSpire with default WiFi info on the bottom of the router or using an ethernet cable.
2. Open a web browser like Chrome, Edge, or Safari
3. Enter the IP Address **192.168.1.1** – This should take you to a Calix page asking for **Username & Password**
4. Enter the **User/Password** info from the bottom of the router and submit

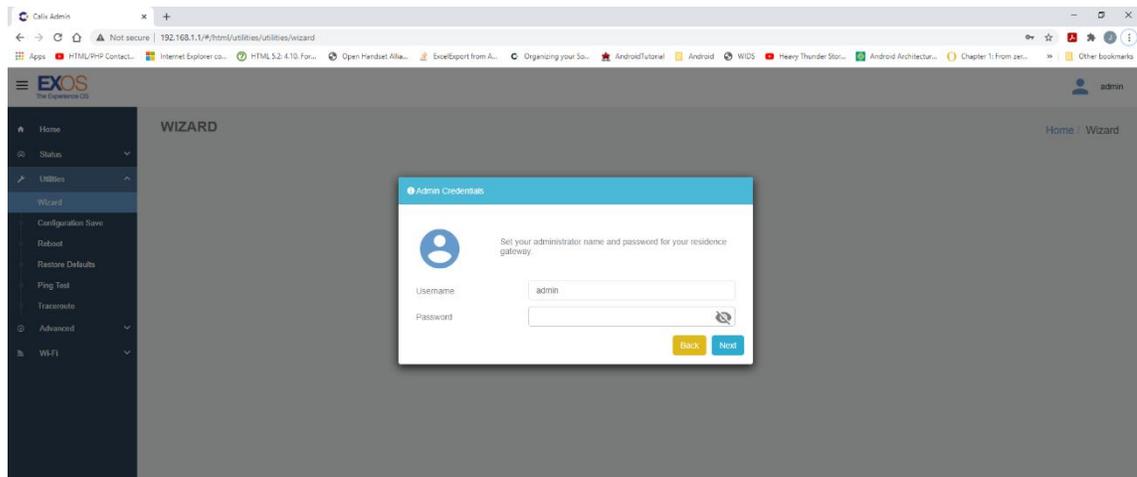

5. Verify Language and Time Zone are set and click Next

6. Enter new admin **Password**
7. Select **Next**

8. Make sure Wi-Fi is **ON**
9. **SSID Name:** Change this to whatever you want your network to be named. This is the name people will see when they connect to your WiFi
10. **Password:** Enter a new WiFi password
11. Click on **Next** to save changes.

If you were connected to your GigaSpire router wirelessly to begin with, you must reconnect using the new WiFi information you setup in the previous steps.
