

# WIRELESS BACKUP SENSOR SYSTEM

## MOSS-HD-BUSS-WL

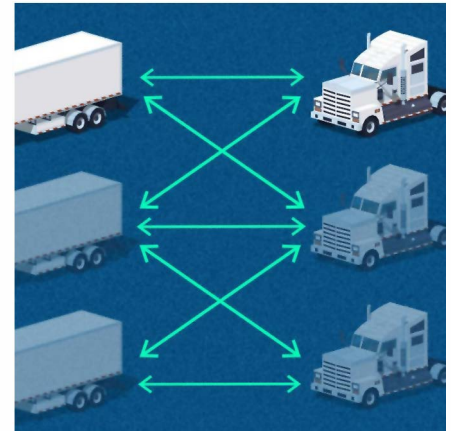

### WIRELESS

The MOSS-HD-BUSS-WL uses the latest wireless backup sensor technology. A simpler and easier installation means there is no need to run excess cabling through the vehicle. Perfect for vehicles with a difficult installation.

### VISUAL & AUDIO ALERTS

Large LED readout display simultaneously monitors 4 zones, indicates actual distance to the closest object and provides 3 adjustable audible alarm levels. It can also be mounted on your rooftop or dashboard.

### TRAILER SWITCH

You can sync your tractor with as many equipped trailers as needed. No pairing is necessary. Just connect and go. Connecting to multiple trailers has never been this easy!

The **MOSS-HD-BUSS-WL** displays distance, accurate within inches, allowing the driver to identify the precise location of obstruction when backing up a vehicle. All done simply, reliably, and **wirelessly** to a control box. This box communicates **wirelessly** with a large LCD panel inside the vehicle. Clear warnings appear on the display, and when the rear bumper draws close to an obstruction, an alarm sounds. Sensors can be installed flush mount or under the bumper for a range of applications. The sensor provides back-up assistance for all types of commercial vehicles including single unit trucks, trucks with trailers, off-road, lift truck, and construction vehicles.
