

A modern bathroom with a double vanity, a large mirror, a glass-enclosed shower, and a bathtub. The vanity has a white countertop with two sinks and a large mirror above it. The shower is glass-enclosed with a walk-in door. The bathtub is white and positioned on the right side of the room. The floor is covered in light-colored tiles.

Bathroom Design Process

Step 1: Existing Conditions

The first step in any design is to see what we are working with!

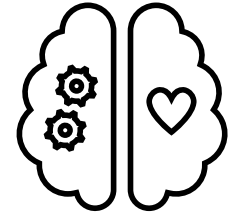

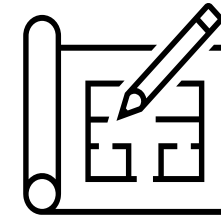

- In this stage we will:
 - Measure the space(s)
 - Take before pictures
 - Draw up the floor plan(s)
 - Discuss what isn't working or what the client wants to change
 - Brainstorm a list of wants and needs for the new space keeping your overall budget in mind

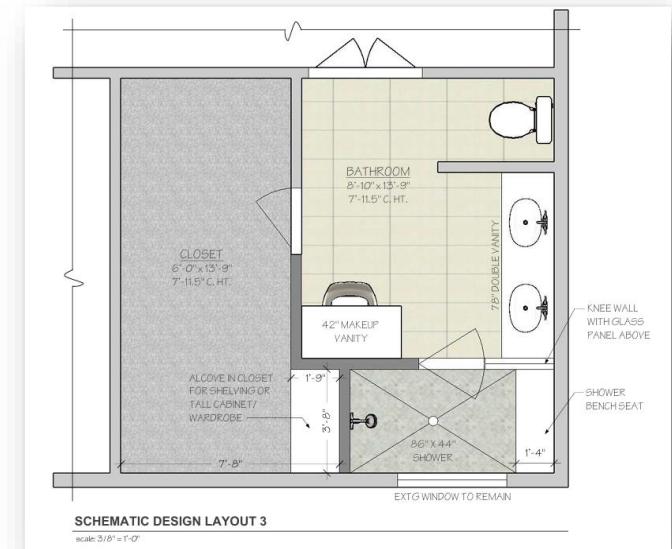

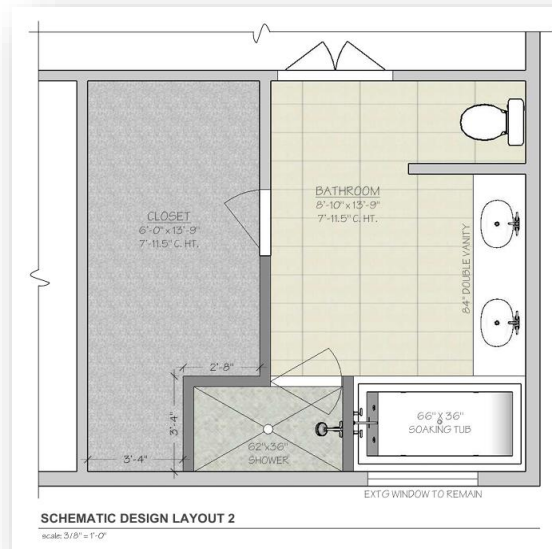

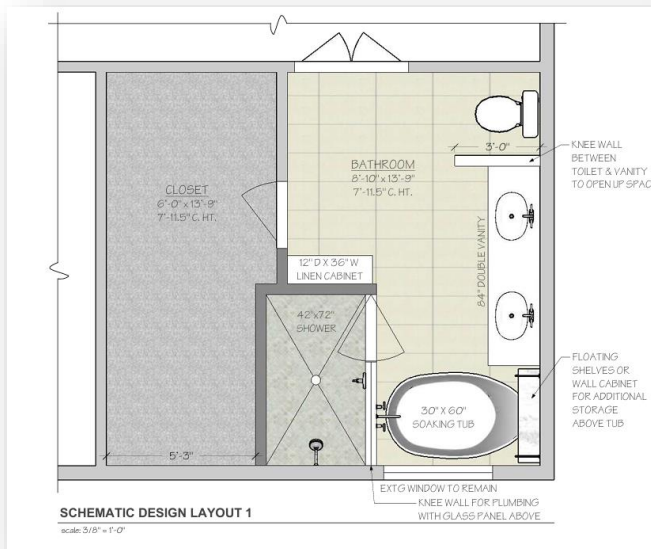

Step 2: Schematic Design

Not sure what you want to do with the space? Don't worry, we'll give you options!

- In this stage we will:
 - Layout new floor plan options
 - Collaborate to understand what you like or don't like about these new layouts
 - Make changes as needed to get a layout most suitable for your wants and needs

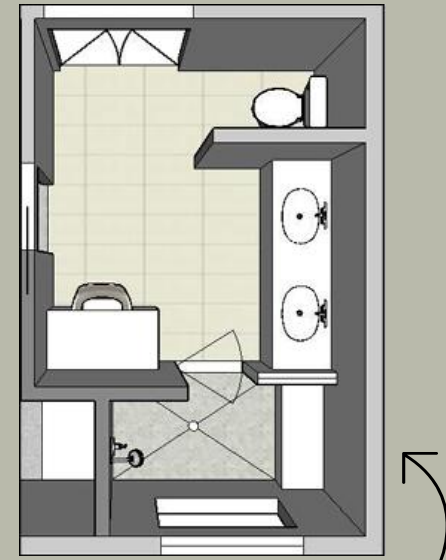

THIS?
OR THIS?
OR THIS?

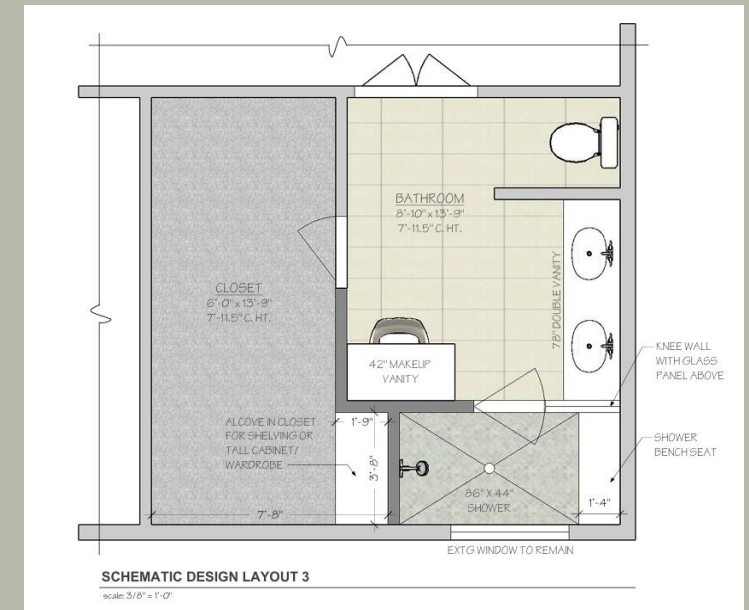

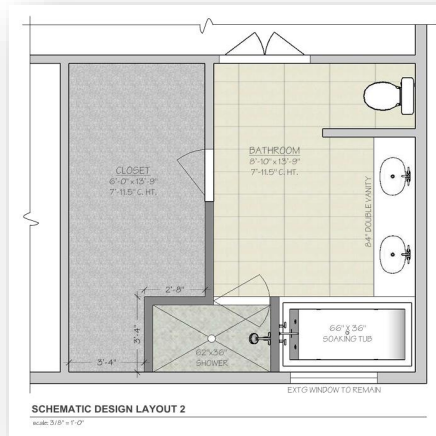

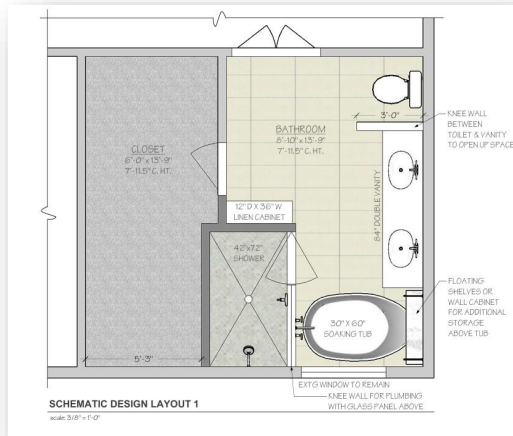

Step 3: Design Development

Deciding on a layout that we can develop into a plan!

- In this stage we will:
 - Decide on a final layout
 - Get a sneak peek of what the layout will look like in 3D from an overhead perspective view

Example of a Perspective View

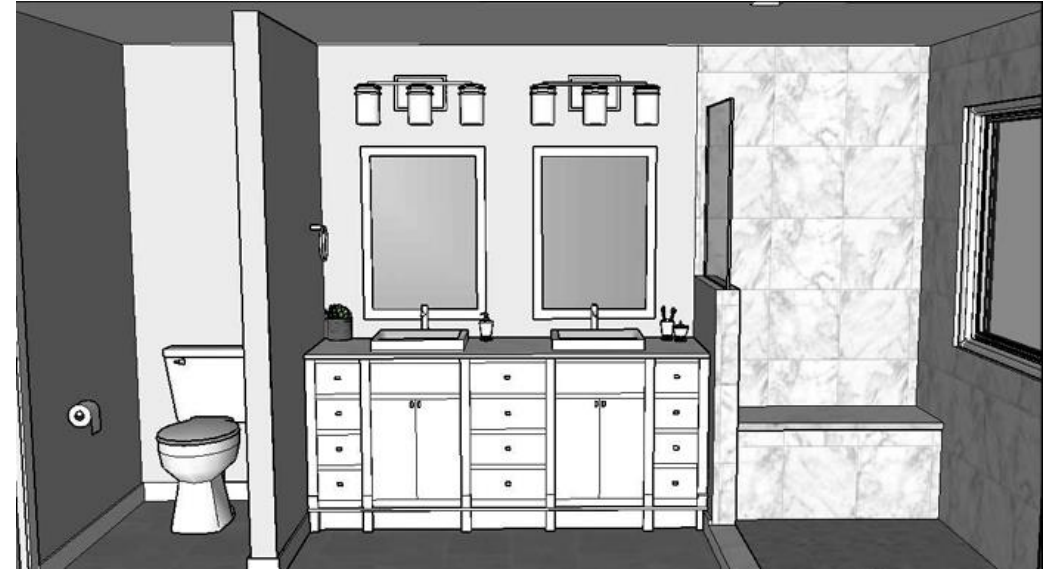

Chosen Layout

Step 4: 3D Views

Time to see what our layout will look like in 3D!

- In this stage we will:
 - Create perspective views of all sides of the room
 - Add accessories to make the space feel more personal for you

Step 5: Enscape and Estimate

The most realistic views of the space before construction!

- In this stage we will:
 - Put the 3D perspective views into a new program and take realistic "pictures" of them.
 - Present an estimate for the project that fits your budget.
